British v American

British board games are pitted against the US market in an innovative strategy game, ATRAM, which could be set to start a new trend in computer-modernised board games.

ATRAM (Advanced Tactical Requirements and Attack Method) is a tactical board game in which you, as force commander, must possess your land-based forces and telepathically direct your airborne and naval forces against your opponent's strategic and tactical targets while simultaneously defending your own.

The role of the computer is to record each manoeuvre and act as an impartial referee. The Spectrum replaces the old-fashioned method of using which would normally be employed.

Miles Broom, creator of ATRAM, is a designer and family man. He has a daughter and two sons, and he thought up the game with the intention that

Anyone for graphics?

Computer users should say good to their art as look out for a competition which will enable them to share all their skill in graphics design.

Computer Professionals Ltd is offering a Commodore 128 monitor at first prize to the entrant who designs the most original frame to introduce one of their services. It can be for one of the services already available or one planned for the future.

The monitor is worth over £200 and gives much better resolution than is normal 128 screen. There is also a second prize of £25, as well as £5 for anyone whose frame design is used to introduce a service.

You can also participate in a Christmas card competition; the winning entry will be used as the official Computer Professionals card and will win £25. Other prizes which catch the judges' attention will be

Leisure software

Microsoft is moving into the home-leisure area with its new Home Discovery Series. Five new products are released for BBC, Amstrad, Commodore 64 and Spectrum.

The Jaffe Plan is a word-count system which should help you control your weight. Prof James Jaffe has written a booklet which accompanies the package.

Know your own Personality is adapted from the book by Paul Heyman and Dr Glenn Wilson. Are you overreacted or underreacted? How emotionally stable are you? Are you tough or underminded? There are all areas covered by the 200 questions.

Know your own Psi-g means to your psychic ability with a series of tests and games. Master Mind and Quasimodo follow the format of the BBC Mastermind TV series, while Sea-Scotia and Solar System will teach you about astronomy.

Prices are £9.95 for cassette and £12.95 for disc.

Microsoft, Watcom, Cavia, London SDCP ADQ

Lower prices

J. Harrison (Milton) has announced that all its games will now cost £3.95, while software will retail at £7.95, with the exception of Zap (£15.95).

New titles include Laserlight, Skyquest and Nightflight for the Dragon, Jellyboxer and Nightflight for the Commodore, and The Old House, Knight Rider, Maxwell House and Schemo for the Sharp. Commodore software include Edison, BasePlan, Secretmaker and Zap.

J. Harrison (Milton), 4 Run Golf, Tangle, W. Yorks WF3 1JF

Spectrum launch

Activision has launched eight games on the Spectrum. They are: Beamrider, Badfire, Blaster, Portal II, River Raid, Space Shuttle, Zaxxon and The Designer's Panel.

Each will cost £7.95, with the exception of Portal II (£9.95) and The Designer's Panel (£9.99).

"Spectrum owners will be pleasantly surprised at the sophistication and long-term entertainment value to be had from our first Spectrum titles," said Geoff Hanks, Activision's

UK managing director.

The Designer's Panel is a programmable puzzle which operates by joystick, and virtually eliminates computer errors and complex programming design.

Activision, c/o Ray Modern Assoc, 317 Forester Rd, Manchester, Sock S14 1EP

Polish up your English

Polish up your English with Micro English, CD level English Language on your computer.

New from Cambridge Computer-assisted Learning, Micro English could help you revise or study on your own, and consists of 24 sets in the program to use or exercise the BBC Learning.

At £24.95, the pack consists of two discs, or program, plus audio cassette. The audio cassette is intended to help you communicate verbally and in written form with your tutor, the computer.

More than 100 questions are featured and can be answered at multiple choice or several questions.

LCL, 28 Ardenale Ave, Essex, S46 4HE

Speed and skill

A staggering total of 1,132 screen locations is claimed by Tasken for its new release, Customs Warzone. Scheduled for launch in mid-November, the game will cost £9.95 on cassette and £12.95 on disc.

Pre-launch promotion includes "master class" long lasting memory, extremely high quality. "What you have to do is find your way to Customs Control and your race of progress depends not only on your ability to develop your apparatus and clear all obstacles, but also your speed. Each game is claimed to be slightly different from any other."

Tasken, 11 High St, Bristington TN9 4PW

We have lift-off!

First prize in a nationwide competition for schools is a five-day trip to the United States for a team of three students and three teachers. Highlights of the trip will be the chance to witness a scheduled shuttle launch from the J.F. Kennedy space centre in Florida, Miami. Also on the agenda is a visit to the EPSCOT

city of the future in Orlando.

The competition, The CUB British Schools Computer Challenge, is being sponsored by Microvitec. It's aimed at secondary schools and the E. Hon. Kenneth Baker MP has expressed his support. "A challenge for schools of this kind will undoubtedly help build upon the considerable enthusiasm for the use of computers in education which has developed over the last few years," he said.

Microvitec managing director Tony Martinez said: "We feel our success, coming only five years after the company's formation, is due to our small success in our performance in the educational sector of the computer market in which it got over all of our schools equipped with our CUB colour monitors. The competition is our way of acknowledging such support."

Mr Martinez went on to talk of a challenge between British and American schools, possibly in 1986. Upper age limits for the competition is 16 and entry forms will be distributed shortly before the preliminary rounds begin in November.

Microvitec, Future Way, Reding Rd, Brackley RG4 7PU

Adventures from books

The Horned of Time, The Saga of Erik the Viking and The Stainless Steel Rat Series: The World are the titles of three new adventures from Moon Publishing.

Adapted from books, the games feature striking story-boards which look more like book covers than software labels.

The Saga of Erik the Viking runs on the Spectrum, BBC and Commodore and costs £9.95 for a boxed pack with booklet and manual. Based on the book by Turry Jones, of Mystery Pylons fame, it has over 200 locations, rich illustrations. The game was written by Level 9 Computing.

The Horned of Time is based on Michael Moorcock's Oswald Bastable series and runs on the Commodore Price £9.95.

The Stainless Steel Rat was written by Michael Moorcock, it was the Horned of Time, and runs on the Commodore. Your mission is to travel through time to save the world.

Moon Publishing, 187 Upper St, Chelmsford, Essex CM1 1JQ

We have lift-off!

have now been converted for the Spectrum, and Mastertronic states that improvements and refinements have been made.

Mastertronic, Park Lane, 171 Park Rd, London NW4 3AL

The road to Galilee

Spanda Software has been looking to the Bible for inspiration for one of its Christmas titles. Galilee, for the Spectrum. This text adventure with graphics is set in the heart of the wilderness around the Sea of Galilee in the first century. Written by the Rev. Peter Goodfield, author of *Jehoshua King*, the game has been thoroughly researched. Price £1.75.

Also from Spanda Empire, now on the Commodore 64 (£6.95). The *OTM* empire is your lot, and you must strive to become its focus before a conqueror the world. You are on the defensive, your mines in both battles and aggression, but you can save the day if you make full use of cunning and tactics. You begin with an equal number of soldiers and the fight is played out on a map of the world, with six moving command ships and eight levels of difficulty.

The *Petroglyph Chronicles* have also been released by Spanda for the Commodore and Spectrum, at £9.95. This is an "epic four-part adventure, designed to appeal to the whole family," according to Spanda.

Spanda, Sir G. Egmont Way, 17 Lance Rd, Berling, Essex

No more clutter!

Compufile is the name of a new workstation which comes to you ready for assembly. Your keyboard sits on glide

runners and you can slide it away once you've finished using it. There's enough room to store up to 200 discs, while optional doors provide extra security.

The Compufile stands 1200 mm high, and is 515 by 500 mm. You can choose either oak or rosewood finish. The Compufile ranges in price from £14.99 to £75.99 depending on additional extras, but post and package costs are extra.

Ames, Ferry Lane, Great Ad, Leam LE17 9PS

Service with a smile?

Chalksoft now provides various services as well as educational software. You can swap a Chalksoft cassette to a particular date, or a disc, if you return it in its original packaging with a cheque for £5.

Chalksoft also guarantees replacement of faulty software free of charge, if received within 28 days together with your proof of purchase. After the 28 days have elapsed, Chalksoft will replace your defective program at a cost of £5.

Sample discs are now available for teachers' use, each disc contains partial review copies of 10 or more programs, and costs £5, and Chalksoft has also published an economics envelope.

Chalksoft, 17 Millbrook Rd, Worcester WR3 3QA

Pint-sized vacuum cleaner

Here's a novel idea: a vacuum cleaner for your computer — the Minovac. This miniature cleaner runs on a one-ohm

Hard-disk Mini-rec from O & S Photographic

hearing or 240-volt adapter and "uses just vacuum cleaner action to remove minute particles and collect them in a cloth bag, unlike compressed air blowers which simply blow the pollutants over the air", according to O & S Photographic.

Two low-quality fan brush vacuum heads and a vacuum bag are supplied with the

device, and you can use a separate attachment to convert it to a blower.

Not only is it useful for removing dust on your keyboard and monitor screen, it can also come in handy when removing carbon dust and paper smudges during printing.

O & S Photographic, South Street, The Maltings, Southwark, Surrey

Low cost platter/printer

Due for November release by Denorex, the Denorex SCP-400 colour platter/printer, which is capable of handling A4 paper as well as a 260 mm paper roll. The printer/platter costs approximately £205 and is compatible with most home computers — BBC, Spectrum, QL, Electron, Commodore 64, VIC-20 and C64.

The SCP-400 is supplied together with a manual, and has the facility to supply wires direct on Spectrum or BBC. Denorex was approached as a Solihull distributor in September, and they are the first new product to be released since then. Denorex claims that the platter/printer is of high quality and offers you tremendous versatility for projects and images.

Denorex, Denon Rd, Boscawen Rd, Birmingham, B40 1GU, UK

Scramble for your Amstrad

Exxon has announced the release of an early sale to its Amstrad range. *Sea Adventure*. The game is a Scramble type

video game which features 10 scenarios. You're in charge on each level. You have the choice of five stages of difficulty, but be warned — they tend to be difficult and progress is virtually impossible.

Jon Day, Exxon sales manager, said: "We're delighted with the version. It's a challenging high speed game and makes excellent use of the Amstrad's graphics and sound capabilities. *Sea Adventure* is a sure winner and we are confident that it will rapidly become the number one game on the Amstrad."

Exxon Amstrad costs £6.95

Exxon, 12 Watlington Park, Farnborough RG14 7NA

Late news

Henry's House, Soldier of Fortune and *Warchiefs* are three new releases from English Software. All for the Commodore 64, the new feature *Pelicans Fan-Land*. *Henry's House* has a royal theme and involves little Henry romping through his new village. Price £9.95. *Soldier of Fortune* is an arcade adventure (£7.95) while *Warchiefs* (£18.95) is a maze game to save a village from destruction by evil forces.

Over 100 copies of Kokotoni Wilf by

elite

to be won

If you own a Spectrum or Commodore 64 then you can enter our free competition. You could win a personalised copy of Elite's best-seller — Kokotoni Wilf

This week's competition is based on the best-selling game Kokotoni Wilf by Elite Systems

Kokotoni Wilf is the first release from Elite Systems and is currently doing very well in the software charts. Elite has already planned a second and third titles which will be

game based upon two popular TV series The Fall Guy and The Duke of Hazzard

Kokotoni Wilf is available for the Spectrum 48K and the Commodore 64 to our competitors is open to most computer owners. The hero of the adventure is a Kokotoni Wilf and his mission is to seek the last fragments of the legendary Elvish Amulet. The game is scored throughout race and with the help of the prize-winning Elvish, Wilf is able to pass from one level to another to carry out his quest

Wilf must be victorious in the dangerous race of the drivers, millions of times before he can collect the parts of the amulet which are to be found in that region. After the old computer game a glowing jewel is won, and Wilf must then go to the next stage of his journey where the findings are awaiting the people of Hazzard. There are photos of sports in the last time when you, including such famous adventures as elite system

An added advantage that Wilf has over the average hero is that he is endowed with a pair of wings which gives him a much better chance against the enemy fleet he has to face

Kokotoni Wilf is a masterpiece which advances game with more than 40 screens, and Wilf can travel through six different time zones to find the pieces of the amulet. All the current features in Kokotoni Wilf provide

The competition is open to under-18s who wish from any state and who wish to win the Kokotoni Wilf. The idea is to get you involved in the game which is so well

The problem which you have to solve is to be successful in the game. The idea is to get you involved in the game which is so well

So have a go and good luck

The Competition

Kokotoni Wilf is a standing on a hill and as the distance he can see is limited. At the centre of this is a small hill which is the Elvish Amulet which Wilf must collect. There are two small hills from the hill in the mountains and Wilf

must move from it to the top and is able to be seen from the Elvish Amulet which is the Elvish Amulet

Read A. This road is 1.7 km long but it is quite close to Wilf and can be seen from Wilf and can be seen from Wilf and can be seen from Wilf

Read B. This road is 1.8 km long but it is quite close to Wilf and can be seen from Wilf and can be seen from Wilf

Read C. This road is 1.7 km long but it is quite close to Wilf and can be seen from Wilf and can be seen from Wilf

Read D. This is the shortest road and is only 1.4 km long but Wilf can only see it from Wilf and can be seen from Wilf

You must decide which road Wilf must take to reach the Elvish Amulet which is the Elvish Amulet

For those of you who have found the Elvish Amulet, a personal letter will be sent to you by Elite Systems

How to enter

Study the problem carefully and when you have decided on a solution fill in the entry coupon and send it to us at the Elvish Amulet which is the Elvish Amulet

Post your entry to Kokotoni Wilf Competition, Home Computing World, No. 1, Colston Square, London W1R 1AB. Entries close at 11.59 pm on Friday November 14, 1985

You may enter as many times as you wish, but each entry must be an original coupon — not a copy — and must be a separate envelope. Important: please follow carefully the instructions on entering — incomplete coupons and entries without the solution on the back cannot be considered. If you win a winner, the coupon will be used as a label to send your prize to clear writing is essential

The rules

Entries will not be accepted from residents of Anguilla, Antigua, Barbados, Belize, Bermuda, British Virgin Islands, Cayman Islands, Falkland Islands, Gibraltar, Guernsey, Jersey, Monaco, Norfolk Island, Pitcairn Islands, St. Helena, St. Kitts, St. Lucia, St. Vincent, St. John, St. Pierre and Miquelon, Suriname, Trinidad and Tobago, Turks and Caicos Islands, Virgin Islands

Zenji 48K Spectrum £7.99

Activision, 18 Marley Hill,
Macclesfield St, London NW1

Words don't easily spring to mind when trying to describe this game, for it has never been like a before. It's a maze game, but what is most puzzling? You have to find the maze yourself!

Looking at the enclosed leaflet, I got the impression that the idea came from a mathematical approach to life. The player is advised to bow to deities, and discuss. Further, the object is to make an extensive path to the Source, learning lessons on the way, otherwise you lose your immortality to misery.

The game starts with a choice of keyboard or joystick, and a

Don't mark for not being able to rub out the keyboard. Another mark made because the 'up' key is absent as 'Z', a mistake, it should be 'P'.

I have no idea how many variations there are, because I didn't get far, I always ran out of time.

Although it takes getting used to, I don't think you play that game, you experience it. It's worth adding to your collection if you like a game that makes you think.

The Dragonstar Trilogy 48K Spectrum £4.95

Delta 4, The Shading, Pier Rd,
Weymouth, Dorset DT9 3PS

This is a three part, all text adventure written with the Quik, for to the genre-masters Dragonstar and Dragonstar II, the Quik is there too!

First, find the precious holy sceptre by a dragon, and escape by outwitting him. The player you is the Lady of Pain.

After loading the second part, you find yourself in an ancient city with a new game, to find the Children Key of Stone.

Then, done, a message is revealed which transfers you to the final chapter of the Dark One, and the destruction of the

Dragonstar Trilogy
I didn't feel tempted to do the hours trying to interpret Dragonstar's events. Perhaps it's just me, but it doesn't match other adventures I've seen.

Presenting the user with a series of location heavily loaded to descriptive titles overrules any use his chance to beat the programme. For me this is not enough.

The four adventures should surround you at a land of fantasy, dare you with an intriguing plot, challenge you to defeat evil forces, while holding up to his chance to beat the programme, but please not. Very low do.

The Final Mission 48K Spectrum £5.50

Activision, 18 London St, Reading RG1 1BB

"Step within Yzer's Temple you are faced on the Final Mission and you control the remaining time, for five new questions on time, Yzer, legend?" I was reminded of those words, from the ancient history, when I was favoured to the altar after scoring 96% of the adventure.

The Final Mission is the last adventure in the Zenji Trilogy. I had not seen the previous ones, so I was quite keen to get stuck with the last and give a good account of myself.

The mission, titled three times leads me to believe that this is going to be a greater adventure with lots of pretty pictures, but this is not the case, in the MM I saw, a new look.

One excellent aspect of this game, is that it features power word, so it's not long before you are playing the game. The visual advice on commands are present and understandable of human paper to point it's very close to reality in its attempts to understand (you said) it point your controlling problems.

I must work out how to defeat the alien.

Adventure assortment

A wide variety of adventure
games to get your brain
working. There's excitement
and laughs in this batch

The Code 48K Spectrum £5.95

Soft Computers, PO Box 45,
Weymouth DT9 3PS

Initially was a great surprise by the introduction came in the beginning of the adventure is large.

It's a piece of Roger (Christopher) Rogers, complete with text and missions, and is a challenge for a lot of an adventure game, interesting.

This is the same one, for me, the most memorable is named in the text only, say (for) based, adventure game.

Your objective is to penetrate a RCB stronghold and get into the code room to discover the main code.

Having discussed the story, you quickly wrap to Soft Computers Ltd, and if you are the

first with the solution, you collect £2,500.

The adventure game itself is a computer modelling, but the bulk of a solution for better game, I found more satisfying. You would expect the high price of £5.95 to include a few extras.

Perhaps the marketplace price is to cover the cost of having the source code printed to Weymouth and to pay out the price money with.

★★★★

The Quest for the Holy Joystick 48K Spectrum £4.95

Delta 4, The Shading, Pier Rd,
Weymouth, Dorset DT9 3PS

A Quik text adventure to make you laugh! And it works. Humour comes in many varieties, that is the very, tip of joke land!

Vis a very cheap text-adventure, it's not, you are transported to London, the holy city. From there, a variety of jokes and riddles take you all over the country to different well-known culture houses.

There you need not only the authors, often described in text this completely comic, but characters and situations from their programs. The last part may be hard to get out of.

Perhaps the most amusing thing about this program, to my surprise, is that of humour, is the way in which the code transfer you to one full screen level. Humour is to humor, so there's no work done to Speed! And who else?

There is one way with 'humour'. You have to be 'in' to appreciate it. As a result, a master is shared with the staff of Macclesfield House, Activision and Dorset, though worth of Macclesfield rules could be a book itself. If you're a software fan, and know the personalities involved, you'll enjoy this. D.M.

Antipital
CDM 64
ET.50

University of Missouri, Columbia
Todd, Kevin M. (1965)

This is a more logical consequence of half-brotherhood than the idea that the lower half, lower to corpse, is fullbrother. So from the fact that two parents are one's ancestors from both, one can have in a half-sister half-brother who travels through 100 oceans, is arranged in a line for his own army. This one grows a mane with the power of a lion, and is a half-brother, a perfect sword arm, half-brother, but not what makes this power different? Actually there are no words in the use of the poems. You must proceed slowly by crossing the sword mathematics of the poems. The poems have an odd spread of generic material, they are mixed on any one. The poems have some of the same material, but they are not the same.

You need different strategies
for different rooms and must select targets to progress. One study is kept the game play short but as you wish.

Obviously the game is enjoyable and the provision of "help" for every action is a major advance. The soundtracks consist of jungle drums and whistles to the accompaniment

Single 4. price really can't afford
increasing sales figures. Ed. 101

This game involves the age-old practice of house-painting. You agree on a to-visit list before leaving. You collect a word or group of words appearing in the end of each street. Signs across are the full sentence and there are six sentences, one for each child level.

The options include the choice of pulsed and still feed and number of sprays. The choice of spray is given "less water." This only refers to the choice of a male or female name and a corresponding figure on the scale.

Your grade year passes around the house pouring each year in the power through. There are children and this is help you to make this. You were most getting supported by the life or a school down the a school union.

Each screen has more information to fascinate you. The graphics are good. The sound is a little noisy, from the fluorescent tubes used as well as the music. The sound effects are nice, especially when the lights are out and you can't see the

Overall, a nice game, which

 Established in Martinsburg 1838

At last, new language packages are appearing for the 486. This package is a more sophisticated version of Prolog. Prolog is a language developed for computer-aided learning, and is used in a variety of teachers and information systems.

The package offers Pico with a range of extensions for the use of the 80⁸⁶, novel and other features. Hi-resolution graphics are not directly available but the resolution plotting is offered. Overall the package offers the features of BASIC, plus a lot more. A good feature is the editor which includes file directional scrolling and many small but convenient

One feature aspect is that using one single command, you can change between Pico and BASIC, each using something of its own language. Hence if you wish to run a hybrid Pico/BASIC program, you may command it to switch to the right editor at the right time. A little confusing, but worth well considering.

Cervell, its northern package, giving a flexible and useful high-level language. This is enhanced by the ability to combine PASCAL-BASIC machine code. I can highly recommend it. —A. W.

Hints and Tips

Slow down!

When using a program on the Commodore 64 it is possible to slow down the flow of letters and figures by pressing the CTRL key while the program is being loaded.

This slows the loading rate down to a speed where it becomes possible to view the program more easily, and it is especially useful when working through long programs.

When writing a program for the Commodore 64 it is possible to have keyboard control as well. This is achieved by using the period, point and comma keys in the program.

The keys which work in place of the period (dot) are as follows:

Typed character	Key	Command
up	1	up
down	arrow key down	down
right	2	right
left	CTRL	left
line	space	line

Andrew Clarke, Warwickshire

VIC plane keys

Trying to long programs can be a costly business. So here's a short program to solve that problem and make saving a job.

When this program is run the BLVDY also should appear after about two seconds. Now by pressing a few keys, the VIC is now a plane and the goal (star) in the program will also not go up any of the 128 which job need for new line programs.

If you want to stop the program that press STOP + RETURN, and to return type ONYNTI.

Endless lives

Here's a tip for those who are tired of having short games or who want high scores. It's for the BBC B's Phoenix by Access.

- press loads
- type PAGE - 4308 (twice)
- type LOAD "Pheax"
- press

When loaded:

- press line 100000000 - 4308
- press RUN and you have 100 lives!

B Evans, Kildesher, Notts

POKES ON VIC-20

Here is a list of POKE commands which may be useful to VIC 20 users.

- POKE 4400 or POKE 4404 sets the computer
- POKE 650 500 makes all keys repeat

* They don't require brackets on the keypad and return keys.

- POKE 765100 8000 loads out running key
- POKE 765101 POKE 765110 8000 loads out return key

* This routine processes the program from being loaded + RUN (switch 1).

- POKE 20,100000000 program has switched from BASIC

* POKE 5000 POKE 5000 0 prevents saving of program

- BASIC to BASIC with POKE 100,300 POKE 300, 300
- POKE 10 when X=0 to 25 positions cursor along a line

* You can also prevent the cursor with this routine

- POKE 20, 0 POKE 7 - run number
- POKE 20,0 POKE 0 -

column number
Control cursor speed by POKEing any number into 20070 (0 to 255)

- POKE 100 POKE 400, 100 POKE 100 in the same as LOAD

These routines should prove useful in your own programs.

A. Marshall, Warwickshire

Colourful Dragon

This program enables Dragon 2000 to mix different colours in the background. You input three colours and then the computer mixes them by drawing lines diagonally in each colour. The BASIC command at line 110 will tell a key is pressed and then returns to main, mixing two different colours.

This is how it works:

- press screen
- input number for first colour
- input number for second colour
- press up for 1st screen
- press for number of lines
- with first colour
- draws lines in first colour
- with second colour
- draws lines one point in front of previous line
- draws line key depression, then GOTO start

This is the program

- CLS
- INPUT "FIRST NUMBER" A
- INPUT "SECOND NUMBER" B
- PRINT "SCREEN 1"
- POKE 0 TO 100 STEP 1
- POKE 0 TO 100 STEP 1
- CLS
- LINE (0,0)-(255,255)

This week we start a regular feature — a page of helpful advice from readers and for readers. Write in to us and share your discoveries with others — there's a software prize for the star letter each week.

- PRINT
- LINE (0,0)-(255,255) GOTO 2
- PRINT
- END EDUCATION GOTO 1

Andrew J. Garvey, Middle

Three colours on Atari

Did you know that the Atari can produce three different colours on graphics mode 0? Well, it can after you set up a display list, involving ANPIC — this usually involves super graphics chip which is found in all English Atari.

After the following code has been entered your screen will turn black and any characters on the screen will become many colours of colour. This is because each character has been divided in 4 x 2 areas, rather than 2 x 2.

- 00 CL = PEEK(100) - PEEK(100) + 4
- 10 FOR I=1 TO 24 POKE 0, CL NEXT I

By interrupting the execution of the code within each 0,4 line, the three default colours can be produced.

As there are only four possible pixel combinations within each 0,4 pixel,

only the colour available in CRT can be produced. Using the appropriate CRT COLOUR or POKE commands these colours can be changed accordingly.

James Harrison, Queens, Lincs

```
00 FOR I=0 TO 4

Send in your letters and tips to us at Home Computing, Fourth, 7th, 15th Floor, London W1R 1AE. A soft cover price will be awarded on the letter which we judge to be the best of the week.

It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or on the cinema.

Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints.

If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code.

Then, if an advertisement bothers you, you'll be justified in bothering us.

The Advertising Standards Authority.  If an advertisement is wrong, we'll have to put it right.

Ask Lail Day, 2 Bank House, Burlington Place, London WC2E 9JN.

This space is devoted to the correction of high standards of advertising.

You could be on our pages

We welcome programs, articles and tips from our readers. If you feel that your work meets our standards, please submit it to us for consideration for publication.

- Programs must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints or conversion.

- Articles on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in *NCW*. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketches/illustrations into finished artwork.

- Tips are short articles, and brief programming routines. Your hints can aid other computer users.

All submissions will be acknowledged and the copyright in such works which will pass to Argus Specialist Publications Ltd will be paid for at competitive rates.

Keep a copy of your work and include an SAE. Label everything clearly and give a daytime and home phone number if you can. All work for consideration should be sent to:

This is another of several programs I've reviewed that has been written by R. Thomas Lake at the school, the graphics are superb and the game fun to play. In this game it's really like this events books along the screen. To score points he must see notes that are found along scores. Score he keeps up to each floor by jumping through large power blocks in the ending. When the reader the top floors in the end score.

There are obstacles to avoid along reader blocks on the ceiling, he may jump over them. Further hazards include spikes that point down from the ceiling. At intervals there placed down, after spaces. Speed your

movement be under one a life is lost and he began the score again, but not from screen one.

As each screen is completed the scores score is shown. This is based on because the number of screens completed in addition to the number of notes seen.

Computer Kensington 32K BBC £12.95

Leaves Games, 1 Moorings Row, London W8H 1AE

Those who already know how to play Ramagora will know what a tactical challenge it is.

For those who've never heard of it, Ramagora is played on a grid of craggle, rivers and passages and involves placing your own coloured stones to form certain shapes.

A strategy allows you to move out of your opponents stones, which is very handy when a stone is in an awkward position. A report shows you to store two steps.

Your aim is to surround and refer one of the two legends of your own stone colour, or one of the three levels of Ramagora. The more stones placed will be able to work

out that there are some Ramagora moves.

Even if you are none the wiser at all here is a puzzle I can tell you that it's an interesting game.

Level one is usually feasible and is the perfect start for novices, level three at the highest level and will give anyone a run for their money.

Perhaps the computer is becoming used to the game is accordingly difficult. Leaves Games, have produced an extremely well produced and thoroughly enjoyable game. £12.95

Pytronix 48K Spectrum £6.95

The Edge, 31 Madras Ln, Coram, Oslo, London WC2

The first thing you notice when looking at this program has a few looking, control is in. This made the program go into into this screen.

On the screen more than a thousand, screen, the action when place would a computer. Now where have it seen this before?

You have to collect master keys, which is often at game scores to a CPU, which is in the form of a box computer. There are 100,000, 100,000, back in from ship (25% insurance) and the 100,000, say one of you, and it before. The screen is full and furious, and every has to be completed every step and again.

I haven't quite figured out the control system, maybe that's because I have only seen it once, it's a little thing. The program when given, all the controls, with control options on screen, but there is no mention of a key to far a satisfactory blue.

It can be very depending on the control system, I feel there could be that they are necessary of a man, with PCB track representing the walls from the average game in this class. £6.95

From Kensington to Ramagora

Here are a few games for
every taste or preference. You
can be a hero or a conqueror

Zorakk the Conqueror 32K BBC £7.95

Leaves, 41 High St, Goshforth, Tyneside, Warr

The story looked very exciting, with the gamebooks format. You have to play the part of Zorakk, and you find the end of the game. There are, which has in three pages per each of the medieval lands of Ramagora.

On looking, the game display is elegantly drawn. The main focus on screen is the graphical representation of the land you are in, which is split up into 10 squares in grid. In each you have a small village, and you can see the map. You can see the buildings which you may see. You can see the map, and you can see the map. £7.95

The game is really a classic

because you have to win a battle to start a chance of obtaining a piece of the screen. When you win or not is totally random. The game can be won by using the key.

There are such a strategy, the player and dragon don't appear to be.

Overall it's not remarkable and will probably be ignored by the younger generation. The complete Ramagora, which allows a sense to achieve a higher score than an experienced player. £7.95

H.E.R.O. 48K Spectrum £7.99

Acropolis, 15 Haden Way, Marylebone, London NW2

Acropolis Here is a lot of it and it of some of those games to American games. It appears that the player's strategy has changed. The game is in the form of a box of 100,000, 100,000, back in from ship (25% insurance) and the 100,000, say one of you, and it before. The screen is full and furious, and every has to be completed every step and again.

Like other stage games I have seen, there are different levels, and different levels. The game is in the form of a box of 100,000, 100,000, back in from ship (25% insurance) and the 100,000, say one of you, and it before. The screen is full and furious, and every has to be completed every step and again.

Again it is other levels, which you have a power/energy game which dominates to you. The game is in the form of a box of 100,000, 100,000, back in from ship (25% insurance) and the 100,000, say one of you, and it before. The screen is full and furious, and every has to be completed every step and again.

Apparently there are levels, which is in the form of a box of 100,000, 100,000, back in from ship (25% insurance) and the 100,000, say one of you, and it before. The screen is full and furious, and every has to be completed every step and again.

The screen is extremely simple, with the highest score, one thousand, score. When you move each level, 100,000, 100,000, back in from ship (25% insurance) and the 100,000, say one of you, and it before. The screen is full and furious, and every has to be completed every step and again.

It seems that it is a great change of you move and others. The game is in the form of a box of 100,000, 100,000, back in from ship (25% insurance) and the 100,000, say one of you, and it before. The screen is full and furious, and every has to be completed every step and again.

Sweet Talker

Cheetah Marketing, 24 Ray St.
London EC1R 3BJ

This is one of the first of the alphabet-based speech synthesizers available for the BBC and, as such, it has to compete directly with Acorn's own Speech Synthesist upgrade. As I have used both, I will compare one with the other as far as is necessary.

Both systems plug into an area of the BBC main board left free for such upgrades, but while the Acorn system needs to be fitted by a dealer, since there are several modifications to add boards and several components mounted on a small circuit board. This plug directly into one of the empty sockets. This is such a simple operation that almost anyone could do it without risk of damage to the computer.

Usage of the two devices is very different. The Acorn upgrade uses the BBC's WORD command, so you might expect a wall of the words spoken to see. In fact this isn't so. The Acorn device is fine if you want to replace one of the BBC words in its vocabulary, but if you want to build up your own words you have to do so by changing those presented into your letters and then building your words up from those parts. Using the Cheetah Sweet Talker makes all this effort completely unnecessary because of the alphabet system.

The theory behind alphabets is that all English words can be broken down into less than 50 component speech parts. Give you lists of these parts in a diary, and a list is chosen from you should be able to make any word in the English language. You must first decide which sounds make up a word and then put them in order together. This is done using a very short manual with prompts and a

DATA statement, and the demonstration program supplied shows how easy it is.

The difference between the two programs is obvious. I spent about 10 min and could now write for the Acorn system but within two minutes I was creating speech from this one. The drawback is the quality of speech. Acorn's words are much better than Acorn's. Cheetah's is very much inferior — as good as that you can refer to it as Robin Hood.

Here is the crux: you can have good quality but a very limited vocabulary or an unlimited vocabulary with poor quality speech. I will stick to the Cheetah system. We all know that it is machines so why not make it and use the words in the list?

The manual does point out the format of the whole system and the manual, which is nothing more than a single sheet of A4 paper. This could be much improved with more detailed information on the use of the system and a better usage diagram. Having said that, it is adequate. I go going to a matter of minutes.

London EC1R 3BJ

Imagine a remote control switch which is able to perform all the functions of a normal joystick, without a cable connection to your Spectrum computer. From a distance up to 12 feet from the screen. Put all that together and you have the Cheetah RAT. In use you are watching, RAT stands for Remote Action Transmitter.

RAT can be used the same way as a remote TV controller. Two parts: the transmitter hand unit in the approximate direction of the joystick moves enable (both supplied) and a switch

switch just on the hand unit sends your commands to the Spectrum. A single one-page set of instructions completes the package.

I was disappointed with the quality of construction of the grey/black hand unit. It doesn't fit the Spectrum and when the battery is inserted and the hand closed, my hand only began to vibrate along its joint. The speech pad in the unit I received was beginning to peel away from the rest of the unit.

By contrast, the plug is made with sturdy black it included to stop resistance on the central slot of the unit in which other modules to be added is placed.

The hand pad on the hand unit is divided into two parts. At the top is an array of buttons for the letters, while close to the back is a flat joystick with eight markings, indicating the eight directions of movement. This is designed for ease of use by left and right-handed players. All you need to do is the Cheetah claims) is touch the markings on the stick to send your man to the appropriate direction. I found you had to press the H, G, M and B markings quite hard to obtain a command, and the markings for diagonal movements almost never worked, even when I pressed really hard.

While it would take an experienced player some time to get used to the new control method, RAT offers you the advantage. If you can't find a joystick screen TV as a monitor, then you can have some damage done from the screen. I found it to be too, and it worked as well as it did in an hour. From 12 feet I wouldn't see my screen too well, but it still worked OK.

RAT can be used the way you designed for use with Spectrum peripherals, this gives you a host of options, but, of course, quite a few games won't work. You can also write your own programs to use RAT. I developed the

BASIC file RAT is a 10K B1 at 1000 to screen, a further 10K at 10K to the screen, or a value up to 10 depending on which single pad is pressed. Similarly, in machine code, you would use 10K.

RAT is an interesting and novel idea. If the stick pads don't really work enough, then the RAT is a good thing with some better than a conventional joystick, as claimed by the manufacturer. Perhaps I'll produce some other things involving such a hand unit which does not feel apart? BC

The RAT — Cheetah's remote action transmitter

Cheetah Sweet Talker

Three in a row

Variety is the spice of life, and there is plenty of variety with these three programs from Paul Sansom and Paul Newsham.

The choice is yours — you can either attack martians, go diving, or just eat eggs and avoid walls.

Although you spend most of your time eating eggs in this game, to avoid them is *The Walls*.

If you have ever jumped going on a totally egg-contrasted diet, then this is the game for you, because you walk around the screen eating as many eggs as possible.

However, danger is always around in the form of rocks and closing walls, which you have to avoid. All is not lost, however, so don't despair. There is a way to escape a grisly death — by getting a key and going through the exit.

Variables

in: from left
to end a start for walls
in: some you are on
to: none
key: man's position
egg: man's colour
ro and lb: wall position
rk and ls: egg colour
pt, pl, pr and pr: wall's position

For each egg you eat you will get 100 points, when you trigger the key you will be awarded 50 points, and if you actually manage to get through the exit — 100 points is awaiting you.

Quick reactions and a keen eye are required for this game, so good luck and get eating.

How it works

74 variables, variables and
proceeds graphics
10-40 lines for graphics
25-40 key on screen
50-100 movement
171-180 main routine
200-210 end of game
220-230 sound for new system
240-250 instructions

HISOFT

ULTRAKIT 49-05

The most powerful probe yet for IBM®. All the features you will not find. AUTO scan, full RAMIMAGE, block IMAGE, CLONE, ALIASE, error trapping, boot trapping. Full TRACE with debugging and much, much more. Make IT BASIC your go-to and powerful.

DEV PAC 04

an excellent example in advanced design of a compact, flexible, disposable and a superb "front panel" designer all in one package. Used by many leading software houses to write their own "Real-PC" clone clones. Call.

PASCAL

A powerful and almost full implementation of Pascal - and Tiny Pascal, a valuable educational and development tool - programs typically run 40 times faster than a BASIC equivalent. Spectrum version includes Turbo Compiler package. £14.95 plus one other compiler that could work with the Spectrum.

HISOFT

Abstract

TIMESLIP
SOFTWARE

100 JOURNAL OF DOCUMENTATION

A challenging game of skill, driving as quick with and steady nerves. Can you keep the ROLLAROLL on a straight? All you have to do is shift a piece of track to its path to divert it, trouble in the tracks always disappear when the ROLLAROLL moves over them. A very addictive one player game.

The Editors Challenge 46, 69

An ancient game of strategy and cunning. Capture all your opponent's counters to win. Play against your Atari® CPC 464 at any of five skill levels, from simple to advanced or play against a friend, you can still make the computer also cannot afford.

The Royal Opera 68 00

Can you discover the object of your quest and then complete it? A classic text only available, with dozens of problems to keep you perplexed for weeks. Postcards include some scene facsimiles and very large vocabularies.

SPECIAL INTERVIEWING SERIES

For a limited period only* Timeslip Software will be giving away one free title with every two titles purchased, at \$199, each choice. P.O.'s payable to:

TIMELINE SOFTWARE, Stoneburn Workshops,
The Old Primary School, Main Street, Stoneburn,
West Lothian, Scotland EH47 5LP

Can you imagine 4D arrays? We show you how

Four-dimensional arrays are hard to visualise. Graham Kendall explains the logic behind the fourth, fifth and even sixth dimension. Even novices should catch on

Recently three colleagues and I were discussing arrays, and how many dimensions you could actually build. We started to put all sorts of shapes and figures on a whiteboard in an attempt to represent how the computer actually uses the array. We didn't find much trouble with a single variable or with a one-dimensional array, but when it came to a four-dimensional array we ran into problems. Other "experts" put their heads round the door, saying "What're you doing? Drawing four-dimensional arrays — that's easy. What are the parameters of an array that they would look at their handwork, hand the pen over to somebody else and walk out confused and baffled."

We realised that if you can't imagine a four-dimensional array, let alone draw one, how does a computer set one up and access it? What's more, how does it handle a five- or six-dimensional array?

This is how we've come to understand it. If we start off with a single variable A , and we type $A=0$ the computer will set up a box called A and inside this box it will store the number 0.

If instead we type **DIM A(3)** the computer sets up three locations (boxes, Fig. 1) called $A(1)$, $A(2)$ and $A(3)$ (assuming the computer starts numbering arrays from 1 and not 0). We can access these locations by typing $A(i)=0$ or by putting a variable inside the brackets, e.g. $A(i)=0$.

If we dimensioned an array with **DIM A(3,3)** the computer sets up nine locations (Fig. 2). In order to access any of these locations you must specify the row followed by the column. Thus, if you type $A(2,3)$ it will access the second row and the third column (see below).

With three-dimensional arrays, if we type **DIM A(3,3,3)** this will set up 27 locations (see below). Imagine a box or a table's edge with four faces on each side, that's what we've just set up (Fig. 3). To access this box

we must specify not only row and column but also depth. So if we type $A(1,3,3)$ we are accessing the first row, third column and third depth (see below).

A three-dimensional array is a way of accessing something in three different ways: front, left and right; vertically, up and down and finally, backwards and forwards. Left and right gives us the row, up and down the columns and backwards and forwards the depth. This can be drawn (Fig. 3).

Now if you want to add another dimension to your drawing you can't — any line you draw will always be in one of the other dimensions. We are faced with the problem of drawing a four-dimensional array and unfortunately, making how the computer stores and accesses it.

Look at it this way. **DIM A(3,3,3)** sets up a four-dimensional array in reality it sets up two three-dimensional arrays (Fig. 4). The last parameter decides how many three-dimensional arrays are to be set up, thus **DIM A(3,3,3)** sets up two three-dimensional arrays giving 54 possible locations ($3 \times 3 \times 3 \times 2$) while **DIM A(3,3,3,3)** sets up seven three-dimensional arrays giving 189 possible locations ($3 \times 3 \times 3 \times 3 \times 3$).

In a four-dimensional array the first three parameters relate to row, column and depth, while the fourth parameter relates to which three-dimensional array you wish to access. So $A(3,3,3,1)$ would access the array in Fig. 4 whereas $A(1,1,1,1)$ would access the percentage array. A five-dimensional array **DIM A(3,3,3,3,3)** sets up 243 locations ($3 \times 3 \times 3 \times 3 \times 3$). Think of this as four three-dimensional arrays (Fig. 5). The computer requires this by row, column, depth, sub-row and array within sub-row.

Thus if you type $A(3,3,3,3,1)$ to access row 3, column 3, depth 3, sub-row 1, and array 1 within that sub-row. In this way $A(3,3,3,3,1)$ would access the

1	2	3
---	---	---

Fig. 1 One-dimensional array

1,1	1,2	1,3
2,1	2,2	2,3
3,1	3,2	3,3

Fig. 2 Two-dimensional array

Fig. 3 Three-dimensional array

array in Fig 3, and $4(3,3,3,3)$, it would accept the percentage sign.

Now IBM $4(3,3,3,3,3)$ gives us nine three-dimensional arrays, which mean 243 possible locations (3x3x3x3), but if we IBM $4(3,3,3,3)$ this also gives us nine three-dimensional arrays and then 243 locations. If this is the case why do we need more than four-dimensional arrays?

We'll leave you to puzzle that one out for yourselves. By the way, if you find out, could you let us know please?

Fig. 4 Four-dimensional array

Fig. 5 Five-dimensional array

The army game

In this program from J D Bateman — a General has to make his way back to camp, but rebelling soldiers make life difficult

The General does not necessarily rule OK with this game which shows how the Dragon's low resolution graphics can easily be used for board games.

The program is based on a game of strategy for two

players one assumes the role of General, the other the role of the rebelling soldiers. The General is to reach the safety of the camp or kill enough soldiers so as to make defeat impossible.

The aim of the soldiers is to

Variables

A,B values used to give to co-ordinate more of remaining soldiers

S number of soldiers

G position of General

X explains the name of the camp (either present or occupied by a soldier)

GF screen position of the piece

T number of moves made by the General

overrun the General and prevent him from reaching the camp and forcing him to surrender.

As players become more experienced in the game, the

General is universally hated to surrender. Players therefore usually play one game then reverse roles.

From this program you may be able to develop other games, using some of the graphics ideas included.

How it works

1-20 set up variables and draw the board

21-30 check and make the General's move

31-40 play and move soldiers

41-50 check and make the soldiers' move

51-60 terminate

61-65 play and print details

Floorway TI-99/4A £7

Swindon, 10 Adams Rd, Stockport, Cheshire

This is a different and intriguing game for the uninitiated TI. You must collect eight gems that are located along the screen. Only when all have been recovered can you enter the treasure room that takes you to a different level.

The problem is how to reach the gems. There seems to be only one route possible.

Despite my wife enough to walk on, but Floorway takes the slowest route of winning to disappear while you are standing on them. Looting the last four of them may mean you are unable to see them on a planned route.

❑ All this won't persuade my friends, but it's better to be right than wrong.

involved — your steps supply a sense of the size of the screen and you can see the screen. Should this run out before you reach the treasure, or you fall too far, then it's back to the beginning yet again.

There are two versions of the game on tape. One uses the keyboard as control means, the other requires a joystick. Both work adequately. 2.5

★★★★★

Meltdown 48K Spectrum £5.95

Kewen, 28 Graham Rd, Hinxley, Huddersfield

Good are the days when working for a firm meant you risked losing your job. In the afternoon you are working for a firm. However, however, working means you are the player.

A monster has landed and spread radioactive coolant through the top rooms of the installation. Wearing a gas-proofed spacesuit, your task is to collect the coolant and return it to the main room, at which point radiation levels will return to normal.

You are hampered by two slow big forms, blobs, which act as obstacles and therefore you get out of the way, and that's

which you can shoot.

There is also floating space which can take you out to the top of the screen from the bottom.

The graphics are good, and I particularly liked the detailed background. Good and a little more of sound. My major criticism is that there is no joystick option, no power option or full of data and I found the game moved a little too slowly for my liking. 3.5

The Egg Rounder/ Food of the Gods TI-99/4A £7

Swindon, 10 Adams Rd, Stockport, Cheshire

These two games are described as being suitable for the younger members of the family (though there seems to be no specified age for either game). Both are very similar, but The Egg Rounder is the more of the two.

In both, the screen shows a view across of floorways with one-way or two-way traffic. It simply consists for some to reach the other. However, there are two objects that you must in The Rounder that is a flag of mine, and in Food of the Gods you collect beans eaten by an owl.

The keyboard controls your movement. It has 10 keys, control, walking, left and right and the movement is used to jump. When it comes to some ladders, however, you must find the correct key, which can be any or none, or take you up or down. This seems to be different for each location. While you are walking about, the random number has time to catch and catch you up.

This probability with the key movements is described as being suitable for the home of self discovery, essential to all games of chance. I found it amusing and ultimately boring. 2.5

Fast-action fun

Here's a selection of the latest arcade games for you to savour. Read the advice of our experts to help you decide

Enduro 48K Spectrum £7.99

Swindon, 10 Adams Rd, Stockport, Cheshire

Enduro is a car race which starts in one of the cities of America, and begins up to the next place. According to the description on the tape you go through traps, obstacles, desert lands, through mountains, forests, snow fields, and back again. This isn't a completed race, it's just a day of racing, but you get a sense of driving through the night, as well as through the day.

The sound control system is offered to you, and they are very simple. It's a bit of a pity that the road and the scenery aren't as good as the sound, but the experience that the car is moving forward isn't really to be denied. 3.5

River Raid 48K Spectrum £7.99

Swindon, 10 Adams Rd, Stockport, Cheshire

You are in a low flying aircraft, and your mission is to destroy all the bridges over the river. The following is the path of a river.

This is one of the first games that I wish I had a joystick, although the keyboard controls are simple. The reason for this is that I got so used to the way my fingers moved that after about two hours, just using the keyboard and the mouse.

The scenery is quite good, and gives you the impression of moving forwards. All the time you are moving forwards, the screen is a bit of a blur, and the screen is a bit of a blur, and the screen is a bit of a blur.

Of course, you must find the path of the river, and the path of the river is a bit of a blur, and the screen is a bit of a blur, and the screen is a bit of a blur. The better you move you get, the more difficult the game becomes. 3.5

The graphics are quite good, and gives you the impression of moving forwards. All the time you are moving forwards, the screen is a bit of a blur, and the screen is a bit of a blur, and the screen is a bit of a blur.

According to the Sinclair handbook despite the complex layout of the Display File, interactive games are easy, so you can direct a character at any screen position with the function SC:R2000. However, what the handbook doesn't tell you is that the function will only direct characters on the Spectrum's existing characters or SCREEN does not work with user-defined characters which, if you want your game to look good on the screen, are just the characters you will want to direct.

Fortunately, there is a relatively easy solution to this problem: redefine some of the existing characters to the characters you want. How? Read on and I'll explain.

The Spectrum's character register data which defines which dots are INC and which are PAPER exist in ROM. You can't change them in ROM, but what you can do if you want to alter some is to transfer this data to a safe place in RAM, where they can be altered, and change a system variable which is called CHARS in the handbook. This system variable tells the computer where to start looking for the dot patterns when PRINTING a character on the screen.

The first thing you must do is create a safe place in RAM to store the characters in. This can be done by issuing RAMTOP, but this will be dangerous for 16K and 48K machines. The following instructions are for the 128K Spectrum; if a different value is required for the 16K Spectrum, this is shown in square brackets. Lower RAMTOP with the down command.

CLEAR 64000 (128K).

This will leave enough space for the normal and UFGD characters you. Now copy the character set from ROM to the safe area with:

```
10 LET % = 64000 (128K)
20 FOR % = 0 TO 255 DO 40
30 POKE % + 64000, %
40 LET % = % + 1: NEXT %
```

Finally, alter the system

Interactive games on the Spectrum

**Want to know how to redefine existing characters?
HCW regular David Nowotnik shows you how**

You can use the following short routine to redefine any character of ASCII code between 32 and 127 with the following example, you store your values of numbers one to a line, from the top down:

```
10 INPUT "Enter character code", %
20 LET % = % + 64034 (128K)
```

```
30 FOR % = 0 TO 127
40 INPUT :
50 POKE % + 1
60 NEXT %
```

You could, if you so desired, alter all 96 of the printable character set, then return the computer to the original set with the command:

**POKE 126653
POKE 1266748
CHARS with the command:**

**POKE 12666, 0
POKE 12667, 255 (128K)**

All should appear quite normal, except that your Spectrum is now accepting the copied character set every time something is printed on the screen. You can now redefine any character you want.

The easiest way to do this is to use a special program designed for this purpose of changing your characters manually.

Take a sheet of paper and draw an 8 x 8 grid. Divide each square with the "dot" and which will be "off" in your old character. Mark these "on" with a cross. When you have finished, work along each row of the character, and assign the following value to a box if it is "on".

Add up the total for each row and write that value alongside the row. In the above example, dots with the ruler 64, 16, 3, and 1 are "on" therefore the row total is $64 + 16 + 3 + 1 = 84$. When you have finished, you should have eight numbers all within the range 0 to 255.

Dive, dive, dive!

In this game you command your own submarine, called the Spectrum. Your task is to intercept enemy shipping on the interface straight. You are armed with six torpedoes (five on video) and your mission is terminated when all your ammunition is exhausted.

The difficulty of the game lies in the fact that you can judge the range and speed of your targets, which vary in length from eight to 40 pixels long. You must also check each craft for flags: your friends have flag and your enemies don't.

The score gained by sinking enemy craft depends on their range. If you manage then you lose 50 points. If you sink an allied craft then you lose points equivalent to twice the points you would have gained if it had been an enemy ship.

A good score is anything over 500 points. If you reach 600 you're doing really well.

Programming tips

1. **RAM addresses:** Loop and sub-routine listings in upper case, RAM notes in lower case.
2. **Flag bytes (200 and 1100):** plaintext A is enemy video mode (turn (2100) (2000) B is enemy video mode.
3. **Submarine's home (1010):** enemy video mode, graphics A, 2 = space; B, and adding two extra spaces for each bit. The two space (turn, line 1100, not line and four spaces respectively).
4. **FORN (1000-10) subroutine:** point group explosion effect. Characters are returned by FORNing 1000-10.

David Hughes' program about submarine warfare takes you down beneath the surface of the interface straits, hunted by enemy shipping

Variables
 line highest score
 10000
 11 number of torpedoes in left hand tube
 12 number of torpedoes in right hand tube
 13 position of left hand torpedo
 14 position of right hand torpedo
 15 horizontal craft position (0/255)
 16 craft selection (0/10)
 17 flag selection (0/10)

How it works
 40-60 initial game processing: establish high score, display instructions, set LIFO, draw home.
 70-90 set individual game variables, fill torpedo tanks.
 100-120 game supervisor loop: check score, update random elements.
 1300-1400 secondary supervisor loop: run all random elements, call for execution of sub-routines.
 1500-1700 sub-routines for craft movement.
 1800-1900 sub-routine check if torpedo is fired, report status with tube flag, update torpedo rack display, check for hit.
 2000-2100 sub-routines for explosion, update score.
 2200-2300 flash screen: check current score against high score, clear screen for next point.
 2400-2500 scored sub-routine: destruction sub-routine.
 2600-2700 graphics assembly, report status, location.
 2800-2900 draw torpedo rack and home of submarine.

Air Traffic Control 48K Spectrum £5.95

Matrix Games, 44 The Broadway, Walsley, Walsley, Walsley

Though a sponsored program, Air Traffic Control (also, very quickly called Matrix Games' Super Local Facility), is a fascinating to watch, and interesting to play. It's a simulation of controlling a region of air space.

The player is shown with a control and then will have to a simulated radar screen which contains a map of the area. Several and air traffic and a display area are also shown. You must first make planes in a new space in a flight and speed them to the different areas, and then hand it on to the next sector.

Military aircraft which are too minor just control from your sector in the time moving from gray aircraft. You must answer adequate questions, even when a 707 disappears and has to drop in height.

Much more information such as dimensions and aircraft type is also given. In this case the level one plane controls in total. Level one is so controlled that not more a real controller could cope.

The package has a keyboard control and a manual which must be studied.

As described in a flight simulator but different. **DM**

Scrabble 32K BBC £12.95

London Games, 2 Monks Lane, London W14 1AB

Have you ever asked about a game that is being used to celebrate that game board with a world's record played in twenty five years a day, night days a week?

Now you can play, without doubt, what many in the top game world mean for the BBC. It's not only great entertainment but also superbly presented, with one of the best instruction booklets I've ever seen.

It's not really surprising that Scrabble is a board game which is so often the playing of letters on a 15x15 grid. It's a game which is so often the playing of letters on a 15x15 grid. It's a game which is so often the playing of letters on a 15x15 grid.

The game is a game of letters on a 15x15 grid. It's a game which is so often the playing of letters on a 15x15 grid.

and it provides a weekly opponent. There are four levels of skill level 1 is the easiest but level 4 is way above any standard but is approximately half of about one minute per move.

The game is a game of letters on a 15x15 grid. It's a game which is so often the playing of letters on a 15x15 grid.

Thanks, London Games, for a magnificent game that can only be described as one to perform.

Words and wings

Find out how good you are at the English language or save lives at 20,000 feet

Kensington CBM £4 £12.95

London Games, 2 Monks Lane, London W14 1AB

This is definitely a thinking man's game — an exceptional one. It's a board game which requires skill and strategy.

When first released, Kensington was called as the best game since the days of the board game. It's a game which requires skill and strategy.

Although, in all fairness, it does have some drawbacks.

For those not familiar with the original game, the board game displays a number of various moving figures in the first part, which are placed on the board. In the second stage, players move the pieces in an attempt to escape the net.

It's a game which requires skill and strategy.

The controls are a bit awkward and slow. It would be a good idea to make use of the joystick instead of the keyboard. However, it's a game which requires skill and strategy.

Perhaps, the game will not be as popular as the board game. It's a game which requires skill and strategy.

IN PROGRAM

[illegible]

Jet Pac RBC £7.95

Ugmaat, The Green, Ashford
to-South, Lincs LE15 3HU

Ugmaat's new game for the BBC sets a new standard in fast-moving graphics, and also in show presentation. It is a spin-off of the booming computer game.

The last of the game is to start on a randomised board the M2000.2 screen along a line that is to collect fuel and components for a spaceship in order to blast off to the next planet.

The computer has a powerful laser gun with space-like facility which can destroy almost at choice. This does not make the game easy, however, as there are lots of aliens and the Jet Pac controls are very fast and responsive, making it difficult to control.

Each planet contains a

different type of alien, and according to the packaging there is a mixture of planets for the 1 hour test drive!

Also on the planet are bonus objects such as gold bars and bombs which blast down the screen and stay for a few seconds before disappearing.

This is a fast, colourful arcade game with good graphics and excellent sound. I liked the opening music. Perhaps the game is a bit repetitive, but good fun to play overall.

Scandalously YI-99/4A £3.50

Sally, 14 Station Rd, Brough, N
Humberside HU11 1QR

This is a one rally game which takes place in three stages. You gain a car down a three part winding (the view and text that scroll as you move).

Propelling the car is not too demanding to control, you then start along a winding mountainous path before coming under a steep bridge. In the final part you drive along a crowded highway, dodging the traffic.

At the end of each stage the number of points scored is given on screen. You have three cars with which to compete. Your final score depends on the number of stages completed and any bonuses awarded, amount of precision.

At the end of the game a final

of three shows the score and your place in it, but there is no final score display incorporated.

The 3 and 4 keys control left and right movements of the car, but some movements here are unusual speed and controlling it around corners is not done easily, partly because of the long, very dramatic, but mainly because they do not work at request.

This game needs Expanded
RAM.

Pyjamarama 48K Spectrum £6.95

Whitby-Gem, 44 The Broadway,
Barnsley S80 1JL

Build the plot of Jet Set Willy as graphics about first upon the view, and much more detailed, and you get the pyjamarama (meaning a sleepwalking Willy stage).

There is a variety of objects or objects like, you must guide the bed-covered hero through the house avoiding obstacles of furniture or opening windows, to find the alarm clock, which will wake him up in three hours.

The two programs, you find objects, only those which can be moved, as did you. These objects help to open locked doors. You are controlled by arrow keys which is fine when a Willyman wakes up, and is restored by seeing the food.

If the plot is not original, then why buy it? Well, it is cheap, and decent, and graphics really are superb, with great detail and very smooth animation.

My number one recommendation for the Willy game is to be made in single double hummer!! An enormous variety of articles about you, and all the Willyman items, there's even tips (hardly played with most objects), and hints and tricks.

Good fun, even if not original! D.M.

Astounding adventure: amazing arcade

Whatever your taste you
should find something to suit
you here. A high quality set of
games, chosen by our experts

ZimSolairim CBM 64 £3.55

Melbourne Hse, Centre Yard,
Barnsley TQ10 1TF

This is an adventure game on the

Amiga. The top half of the screen is dependent to a resolution picture of the action. These pictures are not static but scroll constantly across the screen as you move your character about.

The object of the game is to keep on a path up the hillside's slopes and recover some stolen property. You then return to the desert and locate a secret cave to return the gold to the village where you are staying there.

Playing the game is a mixture of moving the character around the screen via the joystick or keyboard and solving two word puzzles. This is accompanied by excellent music.

This is a nicely thought out game for the experienced adventurer. The range of its commands is not too vast but you learn things at one point. The graphics help the action and I like being able to use the joystick.

The game uses a fast load system to a bank of only three screens.

Kakotani Wilf 48K Spectrum £5.95

Shaw, 10 Westfield, Walsall Wals
S20 2DQ

George is one of the most of a character Omega Action, Kakotani Wilf is the biggest appearance of the machine.

He has been transformed back to a time when there were dinosaurs making the earth, although their primitive nature are considerable, it's dangerous even to touch them.

He will dodge various flying creatures, and the obligatory quakes of ground, and he will be in the end of various locations, until you control.

The controls are very simple, left-right and up, are all that are required, and Wilf moves smoothly in response.

The plot may differ slightly, and the scenery is a little different to many, but the same actions are well made, with a previous graphic adventure game.

No, I haven't said, that the game isn't playable in a bit of a way when I would not achieve too many are.

Probably the best character game is that it is average in its plot, which means that it is better than some, and worse than others.
